

Blockchain Explorer

In an increasingly interconnected digital world, blockchain transaction analysis is no longer an option, but a necessity to ensure security and traceability.

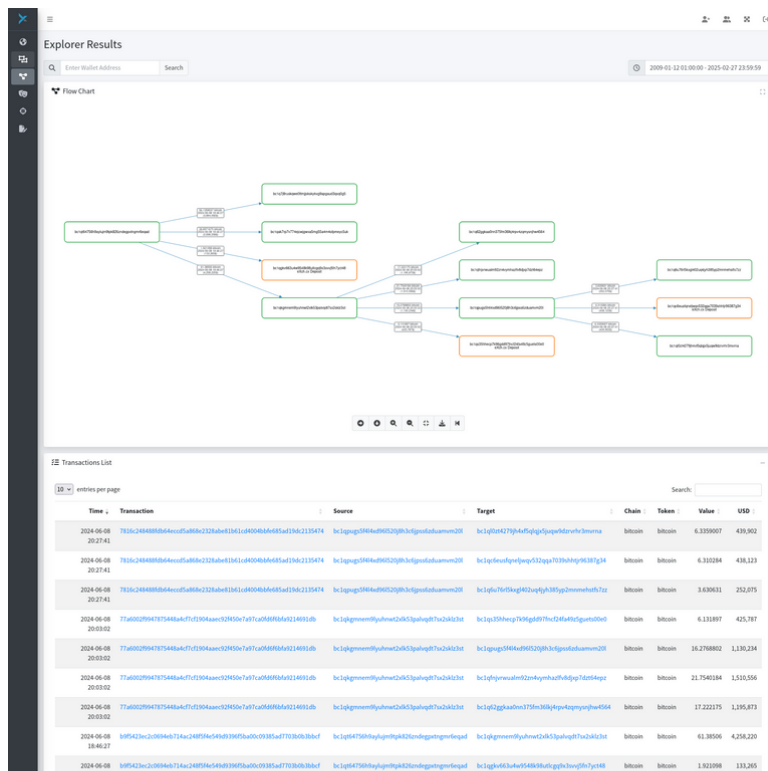

With **xfenser**, you gain visibility into transactions. Our advanced technology helps you track and analyze activities on public blockchains, identifying potential risks and supporting informed decisions for the security of your clients or organization.

About Us

xfenser is a cloud-based platform developed from hands-on, in-depth experience in the field of Offensive Security, gained within the **BackBox.org** Community. Robust and flexible, it is designed to effectively address the real security challenges that every organization faces.

What We Offer

We provide an intuitive and powerful investigation tool for public entities, law enforcement, businesses, and security analysts, with the aim of bringing transparency and traceability to the world of cryptocurrencies.

Features

Entity Tracing

Associate blockchain addresses with known entities (exchanges, corporate wallets, etc.) using a continuously updated database with OSINT sources, making it easy to identify who is behind a wallet and monitor suspicious activities.

Multi-chain Analysis

It supports cross-chain analysis across multiple blockchains (Bitcoin, Ethereum, Litecoin, etc.), allowing you to track complex transactions involving multiple cryptocurrencies and platforms, without losing visibility.

Transaction Analysis

Each transaction is displayed with values in crypto and fiat, date and time, source and destination addresses, and transaction hash, making it easy to understand the flow of funds and identify any anomalies.

Investigative Approach

It allows tracking both outgoing and incoming fund flows between addresses, reconstructing the path of funds and facilitating the identification of illicit or suspicious activities.
